

beautiful vibes
Bhado)))
kurumanobody

※ Do not leave it anywhere other than the designated place.

Simply place it under the floor mat on the passenger seat (in front).

Improved fuel efficiency
Increased acceleration
Improved ride comfort
Car will last longer.

Dimensions : 100 x 30.5 x 3 mm.
Weight : approx. 23 g
Price : 9,900 JPY (approx. ₹5,500)

Honda Fleet Station Wagon 1490cc
fuel efficiency **11.8% UP!** petrol engine car

Honda Insight 1490cc
fuel efficiency **8.7% UP!** hybrid vehicle

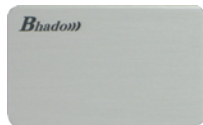

Acceleration has improved with just one Bhado))) kurumanobody in place,
Fuel efficiency used to be 17 km/ℓ, but now it exceeds 20 km/ℓ. **Subaru Sambar**
Long distance driving is not tiring.

Inspection by Mr Fumio Teruoka,
Associate Professor, Osaka University
(Doctor of Engineering)

(When I removed the Kurmanobody from the car, the fuel efficiency returned to 17 km/ℓ.)

Bhado))) Distribution boards & cars

50×30×3mm

※ One or more sheets attached to the engine, air filter, battery, etc. under the bonnet.

- Toyota Vitz 1000cc. After applying Bhado))) on the top of the engine head cover, 12km per litre became 13km per litre in the city and 14 km per litre became 16.2km per litre on the highway, with better acceleration. And because of the improved environment in the car, I don't feel fatigued after a long drive and the sound quality of the car stereo has improved. I can now hear my favourite 'Kobukuro' clearly in the hamoris, and I can practise my singing.
- Toyota Spacio 1800cc. When driving with Bhado))) on the engine part, the normal 10km/ℓ has increased to 13km/ℓ. I was surprised at how quiet the engine became with the ease of just sticking it on.
- Honda Odyssey 3000cc. I put Bhado))) on the top of the engine and the battery + pole area, and it improved fuel consumption by 14% at the first and second refuelling, then by 17%, then by 20%, and now it is 9km/ℓ instead of 7km/ℓ before the application, which is a fuel consumption improvement of over 28%. The engine is now running extremely well. (city, suburbs, highways, equal proportions).
- Toyota Crown 3000cc When we put Bhado))) on the engine, the battery + pole and the upper part of the air cleaner, the fuel efficiency improved, the acceleration increased, the engine sound became quieter, the car stereo sound improved and the car environment was improved in many ways. The fuel efficiency has increased from 8.5 km/ℓ to 10.6 km/ℓ, which is very surprising.
- Used Suzuki Wagon R vehicles. I used to get honked at by cars behind me that only went 50 km/h even when I pushed the accelerator as hard as I could, but with the Bhado))), I'm happy because I can go up to 80 km/h.
- The CD in the car did not work, but after about three months with Bhado))) on the engine it started to work properly.
- Toyota Passo. I have two of these for my car: there used to be a 'whoosh' sound at around 55-60 km/h, but this has disappeared and acceleration is much quicker. The electrical system is also comfortable.
- 1700cc car. I attached one on the engine. It works better than any other fuel efficiency product. I also put one on the battery in the hope that it would be even more effective.
I also bought one for the distribution board, a mobile phone and a pendant, all of which are very effective.

Manufactured and distributed by Worcera Inc.
